

Problem Discovery

Background

As a BBA student, I often struggled with career clarity. While exploring Product Management, I found it difficult to understand:

- Which skills were required
- Which internships to pursue
- How professionals entered the field
- What educational path would maximize opportunities

The information existed online, but it was scattered across multiple platforms, making career planning time-consuming and overwhelming.

User Research & Insights

To validate whether this problem extended beyond my personal experience, I conducted a survey among 17 students from different educational backgrounds, including BBA, BTech, Class 12, and other streams.

Key Findings

1. Students Have Diverse Career Goals

Students aspired to become Product Managers, Data Analysts, Software Engineers, Entrepreneurs, Investment Bankers, HR Professionals, Writers, and Business Owners.

2. Career Guidance Is Fragmented

Students currently rely on multiple sources such as YouTube, LinkedIn, Google, Friends, and ChatGPT to make career decisions.

3. Common Challenges

The most common challenges identified were:

- Lack of career guidance
- Career confusion
- Not knowing which skills to learn
- Lack of practical experience
- Difficulty finding internships
- Lack of focus and consistency
- Feeling underqualified for target roles

4. Strong Interest in Personalized Career Guidance

Out of 17 respondents:

- 12 selected "Yes"
- 5 selected "Maybe"
- 0 selected "No"

This indicates strong demand for a platform that provides personalized career roadmaps and skill-gap analysis.

What is your current education level?	What year are you currently in?	What is your dream role or career?	What is your biggest challenge in achieving this car.	What do you currently do to find career guidance?	If an AI could create a personalized roadmap to you

BBA	2nd Year	Becoming a valuable asset for startups c	Get best skills and focus on AI skills	YouTube	Yes
BBA	2nd Year	Businessman	Correct investment in different sectors of my busin	I had researched in various applications for confirm	Yes

Key Product Insight

Students are not struggling because information is unavailable.

They are struggling because the path from a career goal to becoming internship-ready is unclear.

Existing platforms provide information, courses, and job listings, but very few connect career goals, required skills, projects, portfolios, and internships into a single guided journey.

This gap became the foundation for SkillBridge.

Persona

Sanidhya, 19

Background

- BBA Student
- Interested in AI Product Management and FinTech
- Looking for internships and career growth opportunities

Goals

- Find a clear path to his dream career

- Learn the right skills instead of random courses
- Build a strong portfolio and resume
- Get relevant internships

Pain Points

- Career confusion
 - Too many learning resources with no clear direction
 - Difficulty identifying industry-relevant skills
 - Lack of proof-of-work to showcase abilities
-

Solution

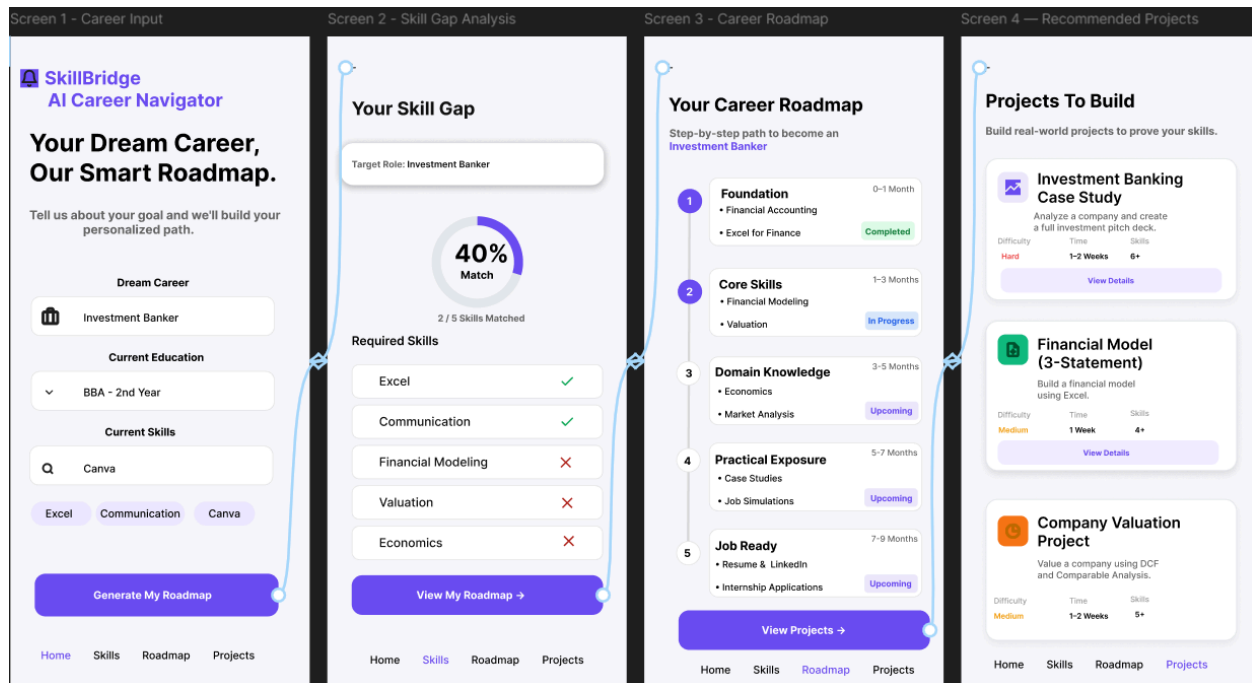

SkillBridge: An AI-Powered Career Navigation Platform

SkillBridge helps students move from career confusion to employability by identifying skill gaps, generating personalized roadmaps, recommending projects, and preparing users for internships.

User Flow

Dream Job → Missing Skills → Learning Resources → Projects → Portfolio → Resume → Internships

Success Metrics

North Star Metric

Roadmap Completion Rate

- Target: 60%+ of users complete at least one roadmap milestone within 30 days.

Supporting Metrics

Project Completion Rate

- Target: 40%+ of users complete at least one recommended project.

Portfolio Creation Rate

- Target: 30%+ of users create a portfolio using completed projects.

Internship Application Rate

- Target: 50%+ of active users apply to at least one internship.

Interview Conversion Rate

- Target: 10–15% of internship applications result in an interview.
-

What Makes SkillBridge Different?

Most career platforms focus on providing courses, job listings, or career information.

SkillBridge focuses on outcomes. Instead of only recommending skills, it identifies skill gaps, creates personalized learning paths, recommends real-world projects, and helps users become internship-ready through practical proof of work.

The goal is not just to help students learn, but to help them demonstrate their skills and secure opportunities.

Future Improvements

V2

- AI Career Coach
- Resume Builder
- Portfolio Generator

V3

- Internship Matching
- Mentor Marketplace
- Peer Accountability Groups
